

Result:

Therefore the pandas program to sort the data is executed successfully.

2

Aim:

To execute pandas program to display ID for employees who did two or more 'jobs' in the past.

Pseudo code:

- * Import pandas library as pd
- * Create a dictionary called 'data' dictionary
- * Extract of store values in emp-multiple-jobs & print.

Sample Input:

Employee database (Emp-id, start-date, job-id)

Sample output:

Employee IDs did two or more jobs
[200]

Result:

Therefore the pandas program for sorting job title in descending order executed successfully.

3

Aim:

To execute pandas program to display the details of employees on job title.

Pseudo code:

- * Import pandas library as pd
- * Create a dictionary called 'data' dictionary
- * Use sort method to sort the data in descending order.
